I am a Computer Science student with Backend experience using Node.js, PHP, and Laravel, building APIs and Backend logic for web applications and startup projects. I work with MySQL, REST API design, Git, and tools like Postman and Docker, and I focus on problem solving and learning while contributing to scalable, real-world software.

Skills

- | | | | |
|-----------------------|---------------------|------------|--------------------------|
| • Backend development | • MySQL | • Firebase | • Problem solving |
| • Node.js | • REST API design | • MongoDB | • Full-stack development |
| • Laravel | • JavaScript (ES6+) | • Git | • Flutter |
| • PHP | • TypeScript | • Docker | • React.js |

Education

Bachelor of Science in Computer Science & Engineering, American International University – Bangladesh (AIUB)

Employment History

Co-Founder & Software Developer • Algo Tech IT Bangladesh (Startup) 2024 – Present

- Co-founded a software startup delivering web and cyber solutions for local businesses.
- Led full-stack development using React, Next.js, Node.js, and PHP for client-facing products, focusing on Backend logic and API integration.
- Built and maintained Backend services in Node.js and PHP, including server-side business logic and Database interactions.
- Implemented and consumed RESTful APIs to connect frontend interfaces with Backend services and external systems.
- Managed end-to-end project delivery, including requirement analysis, basic Database design decisions, development, and deployment coordination.
- Collaborated with clients and teammates to debug issues, improve performance, and ensure stable releases.

Developer • Personal project 2025

- Developed Safe Ride Connect, a secure ridesharing app for AIUB students using TypeScript, Firebase, Expo Location, and React Native Maps.
- Implemented authentication flows with Firebase Auth and integrated real-time location features to enhance user safety and reliability.
- Designed and consumed Backend services and APIs to support user management, ride requests, and location-based functionality.

Developer • Personal project 2025 - Present

- Built a cross-platform social application using Flutter and Dart with WebSockets, Firebase, and Cloudinary.
- Implemented real-time communication features with WebSockets and Firebase to support live interactions between users.
- Structured Backend-related logic for data synchronization, messaging, and media handling to ensure responsive and reliable user experiences.

Developer • Personal project 2025

- Developed an online classroom management system using JavaScript, HTML, PHP, and MVC principles.
- Implemented Backend logic in PHP for class, user, and academic management workflows while practicing structured MVC architecture.
- Worked on responsive UI and interaction flows to support a smooth classroom and academic management experience.
